Abstract

A card unit processing apparatus (10) can conduct various processes on a card unit so as to realize multi-functioning. The card unit processing apparatus (10) is used with a card unit (20) having a storage unit (21) thereto to conduct processes on the card unit (20), and has a communicating unit (3), a display unit (4,11), a control unit (5), a power source (6), a first key (18a), pressed when a processing function to be performed on the card unit (20) is selected, a second key (18b) pressed when detailed data relating to the function selected by pressing the first key (18a) is selected, and a third key (18c) pressed when the data selected by pressing the first key (18a) and the second key (18b) is determined, wherein the control unit (5) conducts controlling operations according to presses of the first key (18a), the second key (18b) and the third key (18c). This invention is applied when a card unit such as an IC card, an optical card, a radio card or the like is used as a portable medium for electronic money, for example.
